

Managing Lyme Disease and Co-Infections

Last year the CDC publicly announced that cases of Lyme disease are vastly underreported, and that 300,000 people are diagnosed each year in the U.S., which is 10 times as many as officially reported. Dr. Shawn M. Carney, a naturopathic physician at Northeast Natural Medicine, LLC, will discuss scientific findings about Lyme and other tick-borne illnesses as well as the most sensitive testing available. He will also discuss the role of integrative medicine as using effective anti-microbials, addressing other underlying conditions which make symptoms worse and removing barriers to wellness.

Dr. Shawn M. Carney

Dr. Shawn M. Carney is a naturopathic physician with a long history of helping patients of all ages with many different health concerns. After graduating with honors as a double major in environmental science and philosophy from Purchase College in New York, Dr. Carney continued to pursue a fusion of these interests by undertaking a career in integrative medicine. He received a doctorate in naturopathic medicine from the University of Bridgeport after having worked for several engineering and environmental science firms and serving as a full-time emergency medical technician. Dr. Carney has studied in a wide array of settings including physicians from the International Lyme and Associated Disease Society (ILADS) and is a licensed naturopathic physician in both Connecticut and Vermont. He lectures widely through Fairfield and New Haven counties on many topics including ADD/ADHD, Cholesterol, Diabetes, Lyme Disease, and Fibromyalgia. He practices at Northeast Natural Medicine, LLC in Newtown, CT.
